

New Anti-Static Film

Full compliance with the latest directive of the NSW Department of Mineral Resources, and can be fitted to any area where a “static warning label exists”.

Austdac can now provide a water clear low distortion anti-static film that may be fitted to the outer surface of display windows of equipment located in hazardous areas. The film provides full compliance with AS/NZ60079.0 and the latest directives of the NSW Department of Mineral Resources. The film is particularly suited to large display windows in explosion protected equipment such as continuous miners, DCBs, load centres and shearers etc.

A separate adhesive sheet is provided with the film to allow fixing to the display window. The film and adhesive are provided in convenient 400mm x 400mm flat sheets ready for trimming and fitting. Other larger sizes are available on request.

A NATA test report (TR2430) can be provided for inclusion in submissions for machine approvals and certification.

- Compliance to AS/NZ60079.0 clause 7.3.1 and 7.3.2.
- NATA laboratory tested (test report available).
- Convenient size 400mm x 400mm x 0.17mm thick.
- Provided with fixing adhesive.
- Water clear.
- Low distortion.
- Suitable for any flat static producing plastic used in hazardous areas.
